

1.1 Introduction to the Course

For Teachers

This module introduces students to The College Board’s introductory information for AP Capstone, AP Seminar in particular, along with any school and teacher policies regarding the program and its relationship with school CTE pathways. This sample course centers around the broad theme of the Dynamic Workforce to cast a wide net around various career technical educational models. Content for this theme will be pulled from multiple subject matter sources and information types to practice all the related cross-curricular and interdisciplinary skills required by the official course tasks. However, the purpose of this emphasis is CTE-specific: to provide CTE students with the basic research strategies needed to do the work in their selected pathway and to innovate and problem-solve within the industry.
